Created at: Sept. 9, 2026

Updated at: Sept. 10, 2026

Associated Risk scenarios (4):

ID	NAME	THREATS	INHERENT RISK LEVEL	EXISTING CONTROLS	CURRENT RISK LEVEL	RESIDUAL RISK LEVEL	STATUS	SUGGESTED MEASURES	STRENGTH OF KNOWLEDGE	JUSTIFICATION
IAM-R01	Unauthorized access to Research Formula due to insufficient authentication	Undetected Intrusion and Lateral Movement	High	• Enterprise Multi-Factor Authentication	High	Low	Open	• Enterprise Multi-Factor Authentication	--	None
IAM-R02	Excessive access to Research Formula	Undetected Intrusion and Lateral Movement	High	• Standard user authentication	Medium	Low	Open	• Least Privilege and Privileged Account Separation	High	The Research Formula is highly sensitive intellectual property. Excessive read access increases the risk of unauthorized disclosure, potentially compromising the confidentiality of critical research information
IAM-R03	Unauthorized modification of Research Formula due to excessive privileged access	Insider thread Undetected Intrusion and Lateral Movement	High	• Identity and Credential Lifecycle Management	High	Low	Open	• Least Privilege and Privileged Account Separation	High	By putting a strong least privilege to who are not authorized to access the formula, we can mitigate the integrity of the Formula.
IAM-R04	Obsolete or unnecessary access to Research Formula remains active	Unauthorized access through excessive or outdated permissions Inadequate Cybersecurity Governance and Accountability	High	• Identity and Credential Lifecycle Management	High	Low	Open	• Identity and Credential Lifecycle Management	High	Obsolete or unnecessary access may allow users who no longer have a business need to access the Research Formula, potentially resulting in unauthorized disclosure of sensitive intellectual property.

Risk matrix view

Inherent

Probability	Certain: The risk source will certainly achieve its intended objective through one of the anticipated methods of operation OR such a scenario has already occurred within the organization (incident history).				
	Very likely: The risk source is very likely to achieve its intended objective through one of the anticipated methods of operation. The likelihood of the scenario is high.			IAM-R02	IAM-R01, IAM-R04, IAM-R03
	Likely: The source of risk is likely to achieve its intended objective according to one of the operating procedures envisaged. The likelihood of the scenario is significant.				
	Unlikely: The source of risk is unlikely to achieve its intended objective under any of the proposed procedures. The likelihood of the scenario is weak.				
		Minor: No operational impact on the performance of the activity or on the safety of people and property.	Significant: Deterioration in the performance of the activity without impact on the safety of people and property.	Important: Sharp deterioration in the performance of the activity, with possible significant impacts on the safety of people and property.	Critical: Inability for the company to carry out all or part of its activity, with possible serious impacts on the safety of people and property.

Probability

Certain: The risk source will certainly achieve its intended objective through one of the anticipated methods of operation OR such a scenario has already occurred within the organization (incident history).				
Very likely: The risk source is very likely to achieve its intended objective through one of the anticipated methods of operation. The likelihood of the scenario is high.				
Likely: The source of risk is likely to achieve its intended objective according to one of the operating procedures envisaged. The likelihood of the scenario is significant.	IAM-R01, IAM-R02			
Unlikely: The source of risk is unlikely to achieve its intended objective under any of the proposed procedures. The likelihood of the scenario is weak.		IAM-R03, IAM-R04		
	Minor: No operational impact on the performance of the activity or on the safety of people and property.	Significant: Deterioration in the performance of the activity without impact on the safety of people and property.	Important: Sharp deterioration in the performance of the activity, with possible significant impacts on the safety of people and property.	Critical: Inability for the company to carry out all or part of its activity, with possible serious impacts on the safety of people and property.

Impact

Risk levels

	Low	Acceptable as is.
	Medium	Tolerable under control. Risk management monitoring must be conducted, and actions should be implemented as part of continuous improvement in the medium and long term.
	High	Unacceptable. Risk reduction measures must be implemented urgently in the short term. Otherwise, all or part of the activity will be denied.
